1. Overview

Trade it is a mobile application designed to help traders, small business owners, and entrepreneurs manage their entire trading workflow from a single app. Whether you buy and sell products, manage multiple customers and suppliers, or just need a clear picture of your business finances, Trade it has you covered.

The app brings together inventory tracking, purchase and sales transaction management, expense logging, and financial analytics into one clean, easy-to-use interface.

What Makes Trade it Different

☐	**Inventory Tracking**	Know exactly how much stock you have at any moment, with real-time updates after every purchase or sale.
☐	**Transaction Management**	Record purchases and sales with full details linked to your products, suppliers, and customers.
☐	**Analytics Dashboard**	Get a birds-eye view of your total profits, expenses, sales, and purchases all in one place.
☐	**Reports & Exports**	Generate monthly reports and product reports, then export them to PDF or Excel files.
☐	**Multi-Currency**	Select your local currency so all amounts display in the format that makes sense for you.
☐	**Contact Management**	Maintain a full list of customers and suppliers with their contact details, linked to transactions.

2. Getting Started

Signing In

Trade it uses Google Sign-In to keep your account secure without the hassle of managing yet another password. Here is how to get started:

1. Download and open the Trade it app on your Android device.
2. On the welcome screen, tap Continue with Google.
3. Choose your Google account from the list.
4. You will be taken directly to your Dashboard.

> **Tip**
> Your data is tied to your Google account. If you ever switch devices, simply sign in with the same Google account and all your data will be right there waiting for you.

Setting Your Currency

Before you start entering transactions, it is a good idea to set your local currency. This makes all the numbers in the app display in a familiar format.

5. Open the side menu by tapping the three-line (hamburger) icon at the top left.
6. Tap Settings at the bottom of the menu.
7. Under Currency Settings, tap the current currency (e.g. AUD).
8. Use the search bar or scroll to find your currency.
9. Tap your currency to select it. It will immediately apply across the entire app.

3. Navigating the App

The Side Menu

Tap the hamburger icon (three horizontal lines) at the top left of any screen to open the side navigation menu. From here you can access:

- Dashboard — Your main analytics overview
- Manage — Products, Customers, Suppliers and Expenses
- Transactions — Record new purchases and sales
- Transaction History — View all past transactions with filters
- Trade Reports — Product reports and monthly reports
- Settings — Currency, usage guide, and account options

The Bottom Tab Bar

Depending on which section you are in, a bottom navigation bar appears with quick shortcuts. For example, when managing transactions you can quickly jump between Products, Purchases, Sales, Reports, and Settings with a single tap.

4. Dashboard

The Dashboard is your command center. It shows a summary of your entire trading history at a glance. All figures here are all-time totals unless otherwise noted.

Total Net Profit

The large card at the top shows your Total Net Profit. This is calculated as:

Net Profit Formula

Total Net Profit = Gross Profit − Total Expenses

Gross Profit = Sum of (Sales Amount − Cost of Goods Sold) for all products
Cost of Goods Sold = Average Purchase Cost × Quantity Sold

Tap any number on the dashboard to see the full precise value without abbreviation (e.g. “T” for trillion, “B” for billion).

Inventory Status

Below the profit card is a horizontal scroll of your active inventory items. Each card shows the product name, its unit type, and how many units are currently available. Tap any inventory card to see full details including total purchased, total sold, and last updated date.

Quick Actions

Three shortcut buttons let you jump directly to Products, Expenses, or the Transactions section without going through the side menu.

Performance Overview

Further down the dashboard you will find two summary sections:

- Financial Summary — Shows Gross Profit, Total Expenses, Total Sales, and Total Purchases, each clickable for more detail.
- Operational Activity — Shows counts of your Sales transactions, Purchase transactions, total Products, Customers, and Suppliers.

Understanding the Numbers

The (i) icon next to Gross Profit opens an explanation of the formula used.
Total Sales = total money received from all sales.
Total Purchases = total money spent on buying stock.
Total Expenses = all logged business expenses.
Net Profit = Gross Profit minus Total Expenses.

5. Managing Your Data

5.1 Products

Products are the items you buy and sell. You must create a product before you can record any purchase or sale transaction involving it.

Adding a Product

10. Go to Manage > Products from the side menu, or tap Products in the quick actions.
11. Tap the + Add Product button.
12. Fill in the product name, category, unit type (e.g. Bottle, Piece, Box), and an optional description.
13. Tap Create Product to save.

Viewing & Editing a Product

Tap any product in the list to open a detail sheet showing its category, unit type, and description. From here you can tap Edit to update the details or Delete to remove it.

Important Rule

You cannot delete a product that has transactions linked to it.
You must first delete all related transactions before deleting the product.

5.2 Customers

Customers are the people or businesses you sell products to. Every sales transaction must be linked to a customer.

Adding a Customer

14. Go to Manage > Customers (or tap the Customers tab in the bottom bar).
15. Tap + Add Customer.
16. Fill in Customer Name, Company, Email Address, Phone Number, and Address.
17. Tap Create Customer to save.

Viewing Customer Details

Tap a customer card to open their full profile, including email, phone, company, and address. You can edit or delete from the same screen.

Important Rule

You cannot delete a customer who has sales transactions linked to them.
Delete the related sales transactions first, then delete the customer.

5.3 Suppliers

Suppliers are the people or businesses you purchase products from. Every purchase transaction must be linked to a supplier.

Adding a Supplier

18. Go to Manage > Suppliers from the side menu.
19. Tap + Add Supplier.
20. Fill in Supplier Name, Company, Email, Phone, and Address.
21. Tap Create Supplier to save.

Supplier profiles work the same way as customer profiles — tap to view, edit, or delete. The same deletion rule applies: clear linked purchase transactions first.

6. Transactions

Transactions are the heart of Trade it. Every purchase you make from a supplier and every sale you make to a customer is recorded here.

6.1 The Golden Rules of Transactions

Rules You Must Know Before Recording Transactions

1. You must select a Supplier AND Product before creating a Purchase.
2. You must select a Customer AND Product before creating a Sale.
3. A product must be purchased before it can ever be sold.
4. A Sale transaction date cannot be earlier than the first Purchase date for that product.
5. You cannot sell more than the current available stock (no negative inventory).
6. If you want to delete a Purchase, you must first delete all Sales of that product that came after that purchase.

6.2 Recording a Purchase

A purchase records that you have bought stock from a supplier, increasing your inventory.

22. Open the Transactions section from the side menu.
23. Select the Purchase option.
24. Choose the Supplier from your supplier list.
25. Choose the Product being purchased.
26. Enter the transaction date.
27. Fill in any two of the three fields: Quantity, Rate per Unit, and Total Amount. The third field will be calculated for you automatically.
28. Add any notes if needed, then save.

6.3 Recording a Sale

A sale records that you have sold stock to a customer, reducing your inventory.

29. Open the Transactions section from the side menu.
30. Select the Sale option.
31. Choose the Customer from your customer list.
32. Choose the Product being sold.
33. Enter the transaction date (must be on or after the first purchase date of the product).
34. Fill in any two of the three fields: Quantity, Rate per Unit, and Total Amount. The third is auto-calculated.

35. Confirm the sale. The app will check that stock is available before saving.

6.4 The Auto-Calculation Rule

Only 2 of 3 Fields Are Required

When recording any transaction, you only need to fill in TWO of the following three fields:

- Quantity (how many units)
- Rate Per Unit (price per single unit)
- Total Amount (the full transaction value)

The third field will be calculated automatically:
Total Amount = Quantity × Rate Per Unit

7. Transaction History

The Transaction History screen shows every purchase and every sale you have ever recorded in the app. You can browse, filter, search, and export this data.

Browsing History

Transactions are shown in a list, most recent first. Each entry shows the date, product name, party (supplier or customer), and the amount.

Filtering & Searching

- Filter by Date Range: Tap the date filter to narrow down transactions between two dates.
- Search: Type a product name, supplier name, customer name, or date into the search bar to find specific entries.

Viewing Previous Rates

When recording a new transaction, you can view the rates used in previous transactions for the same product. This helps you stay consistent with your pricing history.

Exporting Transaction Data

Tap the Download button on the Purchases or Sales history screen to export the visible list as an Excel (.xlsx) file. This is useful for sharing with an accountant or keeping offline backups.

8. Expenses

Expenses are any business costs that are not directly tied to a product purchase. Examples include rent, salaries, transport, or utility bills.

What Expenses Affect

- Monthly Reports: Expenses logged in a given month are included in that month's Net Profit calculation.
- Dashboard Net Profit: All-time expenses are subtracted from Gross Profit to give the Total Net Profit figure on the Dashboard.
- Expenses do NOT affect inventory or product-level gross profit calculations.

Managing Expenses

Access Expenses from the Quick Actions on the dashboard or from the bottom tab bar in the Transactions section. You can add, edit, and delete expense records. Each expense has a name, amount, date, and optional notes.

9. Reports

Trade it offers two types of reports to help you understand your business performance.

9.1 Product Reports

A Product Report shows how a single product has performed over all time. It includes:

- Total units purchased and total units sold
- Total revenue generated from sales of this product
- Total cost of purchasing this product
- Gross profit earned from this product
- Average purchase cost and average selling rate

You can export any Product Report as an Excel file by tapping the export/download button on the report page.

9.2 Monthly Reports

A Monthly Report summarises all activity within a specific calendar month. To generate one, select the month and year from the date picker. The report includes:

- All sales made in that month (amounts and quantities)
- All purchases made in that month
- All expenses logged in that month
- Total Net Profit for the month (Gross Profit minus Expenses)

Monthly Reports can be exported as PDF files, making them easy to share or print for your records.

10. Settings

Currency Settings

Change your preferred currency at any time from the Settings page. Tap the currency row to open a searchable list of all world currencies. Select your currency and it will immediately update across all screens. This is a display-only setting and does not convert or recalculate existing values.

Usage Guide

The Complete Usage Guide in Settings is an in-app reference that summarises the transaction rules, deletion guidelines, and how the app calculates profits. It is a handy reminder whenever you need it.

Delete Account

The Danger Zone section at the bottom of Settings contains the Delete My Account option. This is a permanent, irreversible action that wipes all your data including products, customers, suppliers, transactions, expenses, and reports. Use this only if you want to start completely fresh.

> **Warning**
> Deleting your account cannot be undone. All your data will be permanently removed. There is no recovery option. Export any important reports before proceeding.

11. Quick Reference — Rules Summary

Scenario	Rule
Creating a Purchase	Select Supplier + Product first
Creating a Sale	Select Customer + Product first
First Sale of a Product	Must have at least one Purchase recorded first
Sale Date Restriction	Cannot be earlier than the first purchase date
Out of Stock	Sale is blocked if available stock is 0
Deleting a Purchase	Delete all related Sales first
Deleting a Product	Delete all related Transactions first
Deleting a Customer	Delete all related Sales first
Deleting a Supplier	Delete all related Purchases first
Transaction Fields	Fill any 2 of 3 fields; third is auto-calculated

12. About the Project

Trade it was designed and developed as a personal project to solve a real-world problem: helping traders manage all their buying and selling in one mobile app without needing spreadsheets or expensive accounting software.

Key Technical Highlights

- Google OAuth for secure, passwordless authentication
- Real-time inventory calculation derived from transaction history
- Business rule enforcement at the data layer (e.g., no negative inventory, date validation)
- Export capabilities to Excel and PDF for offline sharing
- Multi-currency display support
- Full CRUD (Create, Read, Update, Delete) for Products, Customers, Suppliers, and Transactions

Ideal For

- Small and medium traders managing physical product inventory
- Anyone who buys wholesale and sells retail
- Business owners who want a mobile-first alternative to spreadsheets
- Traders who need to track performance per product and per month

Trade it — Manage All Your Trading Transactions
